Insights

Consumption Bills go up in summer because of fans and AC. During monsoon, bills come down naturally as weather stays cool.

Cost Pattern 82% of your bill is just electricity usage charge. Use less electricity, pay less — simple.

TOD Timing Evening usage (6PM–10PM) is only 16% — that is good. Running washing machine and water heater after 10PM saves money.

May 2026 spike of 338% was due to 3 AC units running simultaneously for a 5-member household during peak Kerala summer season.

Recommendations and Actions

1. AC Usage

3 ACs running in summer = highest bill and Set temperature to 24°C (not 18-20°C).

Use sleep/timer mode after midnight and Clean AC filters every month also Each AC on 24°C saves ~₹200-300 per bill.

2. Off-Peak Shifting

After 10PM rate is cheapest so Run washing machine after 10PM.

Charge devices overnight so we can get Potential saving: ₹300-400 per bill.

3. Tariff Slab Awareness

More units = higher rate per unit so try to keep under 400 units per 2 months.

Spread AC usage across day (not all 3 together) so avoid running all 3 ACs same time

4. Monsoon Strategy

Monsoon bills naturally low so Switch off AC completely during monsoon.

Use fans in monsoon
